PROFESSIONAL SUMMARY

Java backend engineer with more than five years of experience building microservices for enterprise and government systems. For the last two years at EY, I have been working on the migration of a large provident fund platform from Oracle PL/SQL and Java 8 to PostgreSQL and Spring Boot 3 on Java 21, mainly the Joint Declaration (JD) and eKYC modules. I am comfortable owning a module from start to finish: writing the HLD and LLD, building the services, setting up the gateway, messaging and deployments, and supporting UAT. I am looking for senior backend, technical lead or solution architect roles.

CORE TECHNICAL SKILLS

Languages & Frameworks: Java 8, 11, 17, 21; Spring Boot, Spring Cloud, Spring Security, Spring MVC, Hibernate/JPA, JDBC

Architecture: Microservices, event-driven design, legacy migration, API gateway, service discovery, config server, Resilience4j, workflow and state-machine design, HLD/LLD

Databases & Messaging: PostgreSQL, Oracle PL/SQL, MySQL, MongoDB, Redis, Apache Kafka

Cloud & DevOps: AWS (EC2, S3, RDS, IAM, CloudWatch), Docker, Kubernetes, Apache APISIX, Jenkins, GitLab CI/CD, Maven, Git, Linux

Security: JWT, AES-256-GCM, AES + RSA hybrid encryption, rate limiting

Other: Drools, JUnit, Mockito, Swagger/OpenAPI, Postman; Ollama and OpenAI-compatible APIs

PROFESSIONAL EXPERIENCE

Project Consultant (Cloud & Backend Engineering) | Ernst & Young LLP (EY), Delhi *Jun 2024 to Present*

- Lead the move of the Joint Declaration (JD) and eKYC member modules from Oracle PL/SQL and Java 8 to PostgreSQL and Spring Boot 3.x on Java 21.
- Maintain and extend the microservices of the IVFRT India Immigration Portal, covering production support, defect fixes and new features.
- Rewrote a legacy controller and DAO of about 1,500 lines as a clean 36-class Spring Boot module, and converted complex Oracle stored procedures to PostgreSQL using NamedParameterJdbcTemplate (array parameters, RETURNING, FOR UPDATE SKIP LOCKED).
- Designed a YAML-driven flow-control engine that enforces the order of API calls and per-step rate limits on public Aadhaar OTP and CAPTCHA journeys, using AOP, servlet filters, Redis Lua scripts and Resilience4j.
- Built a UAN verification service on a hashed dataset of more than 200 million records in PostgreSQL, with bulk Parquet loading, incremental updates and AES + RSA encrypted APIs. Wrote the HLD and LLD for it.
- Set the coding standards for the modules: Java 21 records for DTOs, sealed result types, RFC 9457 error responses, constructor injection and YAML-based message management.
- Built the Docker-based infrastructure and CI/CD pipelines for the services, and set up Spring Cloud Config, Eureka and an Apache APISIX gateway (routing, load balancing, JWT, rate limiting), with Kafka for event streaming and Kubernetes deployments. Also managed EC2, S3 and CloudWatch on AWS.
- Moved business rules into Drools, which cut the time to change a rule from days to hours.

Java Developer | Metawing Technologies Pvt. Ltd., Delhi *Jan 2023 to Jun 2024*

- Set up Jenkins and GitLab CI/CD pipelines that cut manual deployment errors by 40% and shortened release cycles.
- Led the backend for Airtel Video KYC, which reduced manual verification time by 30%.
- Integrated the ONDC SDK with the company mobile app, enabling secure digital-commerce transactions.
- Added load balancing, error handling and reporting, and ran UAT before production releases.

Software Developer | National Informatics Centre (NIC), Delhi *May 2022 to Dec 2022*

- Built and maintained sarkari-awas.delhi.gov.in, the Delhi Government housing portal, following NIC and MeitY standards.
- Tuned the application and improved portal speed by 25%.
- Collected requirements from government stakeholders, worked in Agile sprints, and wrote the technical specifications and user documentation for handover.

Junior Java Developer | Etip Infotech, Delhi *Jan 2021 to Apr 2022*

- Built Java applications with Spring Boot, Hibernate and REST APIs, following clean-code and SOLID practices.
- Worked across the full cycle, from requirements and design to code review and deployment.

PROJECTS

- **IVFRT India Immigration Portal (EY):** Maintain the microservices behind a national immigration portal (Java, Spring Boot), handling production support, fixes and new features.
- **EPFO Modernisation (EY):** Java 21 and PostgreSQL migration of the Joint Declaration and eKYC modules, with a flow-control engine, Docker-based CI/CD and an API gateway.
- **Unified LLM Gateway (personal):** A Spring Boot and Java 21 service that routes requests to OpenAI, Anthropic, Gemini, Ollama, NVIDIA NIM and AWS Bedrock. It supports SSE streaming, Caffeine caching, routing by request complexity and OpenAI-compatible responses.
- **Job-Search Automation Agent (personal):** A Spring Boot application that collects jobs from several portals, scores how well they fit using a local Ollama model, and prepares tailored resumes and cover letters. Uses PostgreSQL and sends Telegram alerts.

EDUCATION & CERTIFICATION

Master of Computer Applications (MCA), IGNOU, Delhi | GPA 6.3/10 *2020 to 2022*

Bachelor of Computer Applications (BCA), IGNOU, Delhi | GPA 6.1/10 *2017 to 2020*

Enterprise Architecture, Udemy certification *March 2025*
